

FRESHCAL

Do you have a Hypocalcemia problem?

Estimates are 25-75% of cows are subclinically Hypocalcemic

Cows suffering from Hypocalcemia experience these negative effects:

- Reduced milk production
- Decreased conception
- Suppressed immune function
- Increased risk to be culled

Give FRESHCAL at calving and 12 - 24 hour later to combat these negative effects

Each dose supplies over 50 grams of calcium from calcium chloride, sulfate, & propionate
